

Precision Built SIDING, TRIM & GUTTER TOOLS

OTHERS SAY WE "OVER-MANUFACTURE"

If you care about the quality of the tools you use or sell, you'll appreciate a company that cares about the quality of the tools it makes. Our Siding, Trim, and Gutter Tools are precision built tradesman tools that truly make installation and repair of siding, trim, and gutter faster, easier, and safer.

FEEL THE DIFFERENCE!

These tools are specialty tools that are designed and built to perform to the needs and quality requirements of the professional tradesman. From the solid ring-pin construction of our compound leverage models, and the copper coated steel ball-bearing-action of our trim nail drivers, to the traditional brass-riveted wooden handles of our siding removal tools – you'll find the quality components and attention to detail in the manufacture of each model in this product category to be second to none. The complete offering is manufactured by Midwest Tool & Cutlery Company in the USA.
