

# Hydroshield House Wrap Plus®

Hydroshield House Wrap Plus® is manufactured from a polypropylene woven fabric with a polypropylene coating that contains UV inhibitors.

- Provides protection from water infiltration but breathes allowing water vapor to escape through micro perforations offering protection to the interior wall cavity
- Custom printing for as little as one pallet
- UV resistant and can be left exposed for up to 6 months
- Tear resistant reduces jobsite waste and blow-offs
- Meets and exceeds all current building codes for water resistive barrier as well as air barrier

	PRODUCT SPECIFICATIONS		TEST METHOD
Composition	Woven Polypropylene		
Weight Per Roll	14.4 lbs./ MSF		
Thickness	6.5 mils.		
Tensile Strength	MD	60	ASTM D-828
	CD	44	
Tear Strength	MD	34	ASTM D-4533
	CD	30	
Water Resistance	Pass		ASTM D-779
MVTR/Perms	9 Perms		ASTM E-96
Fire Rating	Class A		ASTM E-84

### HYDROSHIELD HOUSE WRAP PLUS® INSTALLATION

1. Begin by aligning the bottom edge of the roll with the base of the wall, approximately 6" (152 mm) from a corner, folding several inches of the material under itself and fasten securely to a framing member. Be sure that the installation is horizontal on the vertical wall.
2. Unroll Hydroshield House Wrap Plus® with the printed side out, wrapping the entire building including door and window openings. Plastic cap nails or staples with a minimum 1" (25 mm) crown may be used. Fasteners shall be spaced a maximum of 16" (406 mm) on center along studs and 8" (203 mm) on center along top and bottom sill plates. When installing Hydroshield House Wrap Plus® over non-structural sheathing products or foam insulation boards, fasteners must penetrate the framing members no less than 1/2" (13 mm) and spaced as noted above.
3. Cut through Hydroshield House Wrap Plus® using a modified "I" pattern at door and window openings. Fold excess material inside the rough openings and fasten securely through the layers to a framing member.
4. If door frames and windows are already installed, trim Hydroshield House Wrap Plus® as close as possible and tape using contractor tape to seal seams around openings.
5. For vertical laps, fold the edge of Hydroshield House Wrap Plus® under and attach to the structural sheathing or framing member. The seams must be overlapped a minimum of 6" (152 mm) unless otherwise specified.
6. A minimum 2" (51 mm) overlap should be used for all horizontal laps.
7. All vertical and horizontal laps should be taped using contractor tape. Final wall covering should be installed within 6 months of the installation of Hydroshield House Wrap Plus.®
