- Fits 1" hole
- Foam resting points protect surfaces that the ladder is leaned upon
- Lightweight
- Meets all ANSI and OSHA requirements for ladders up to Type 1A, 300 lb. duty rating
- Product weight: 1.5 lbs

Roof Zone by Tie Down's Ladder Standoff is designed to be the best in class, and best value in the market. The Ladder Standoff is compatible with over 90% of the aluminum ladders. The lightweight brackets slide directly into the rungs of most ladders (rung openings of 1 inch or greater,) our ladder standoff adds stability. Perfect for working around obstacles like windows. The standoff brackets weigh only 1.5 pounds and include two parts, a right and left bracket. Each part is made of ultra-lightweight aluminum with foam resting points to protect the surface its being placed against. Once inserted into your ladder, they extend a full foot beyond the edge of your ladder. The installation process is easy and no fasteners are required. To attach, simply press 2 bracket ends inward, toward each other, slide ends into rung holes until proper depth is reached, and release.
