

CLEANING AND MAINTENANCE

Railings shall be cleaned with water and a mild soap or detergent, then rinse with clean water. Do not use steel wool, acid solutions or harsh abrasives.

All railings require occasional maintenance. All railing surfaces require periodic washing. Especially those which are subject to harsh chemical environments.

If tree sap, insects or other similar deposits have accumulated on the railing, wash as soon as possible.

If you detect any scratches in the paint, touch them up. Your dealer has touch-up paint to match the color of your railing.

Waxing painted surfaces after washing is recommended.

Repair anodized finishes according to NAAMM Metal Finishes Manual.
