- Includes toe-board slots
- Includes carrying hand hold to minimize pinch points
- Meets compliance: OSHA 1926.502.
- Test to meet CSA Z259 standards
- Made in U.S.A.

Tie Down Safety is the leading manufacturer of passive systems. No other company makes it easier to protect the perimeter edge of a building, stairway, or elevator shaft than Tie Down Safety. Seamless, easy to use, and safe, the Gator Base Guardrail System fits all upright guardrails in the market because the Gator Base does not require the use of pins. If you have a fleet of the rails from the competition but want to transition to the lightest guardrail base in the world, now you can without worry. The Tie Down Safety Gator Base installs using an impact gun tightening our Gator Clamp. This tightening effect eliminates the loose wobbling of other systems. In addition, the Gator Base Guardrail System can fit both 1.66 and 1.90 OD tube. This is the most versatile and simple to install, passive guardrail system for rooftop and jobsite applications. Tie Down Safety maintains high standards and quality control through quality raw materials and components made in the USA.
