

Lockey USA PB2500 Installation Instructions

PATENTED LATCH AND STRIKE

The device will only lock when the strike enters into the latch and depresses the silver colored Latch Guard. Depressing the Push Bar will not move or rotate the latch.

STEP 1: PREP DOOR

Tools needed:

- | | |
|-------------------------|--------------------------------|
| #2 Phillips Screwdriver | #16, 1/4", 3/8" Drill Bits |
| Hammer | 1-1/4", 5/8" Drill Bits (Trim) |
| Center Punch | Level |
| Tape | Pencil |
| Drill | Hack Saw (for field cutting) |

- For devices installed with LTD or O8L Series Trim, use the trim template.
- Fold template at perforation and place at the meeting edge of stop and door face.
- Tape mounting template to door at a suggested height of 40-5/16" from finish floor level.
- Drill door and frame mounting holes per drill chart on template.

FIT DEVICE TO DOOR

Door widths other than 36" or 48", use the formula:
Distance between stops less 1-7/16" = Housing length

- Cut housing with cover installed.
- Once cut, remove cover.
- Slide mounting bracket into track of housing.

NOTE:

Use mounting bracket as a guide to drill mounting holes.

STEP 2: MOUNT DEVICE AND STRIKE

- Use Mounting Template. Drill holes A and B. Drill hole C if using Outside Trim.
- Remove Device from box and slide push bar/chassis assembly beyond notched housing exposing mounting holes. If field cutting is required, see step 1.
- Remove Nose Piece from Pack "A" and position on chassis as shown. Using 2 ea. 12-24 MS and 2 ea. Sex Bolts, mount to door. (See inset to the right)
- Remove Notched Push Bar End Cap from Pack "A" and install on latch end of device.
- Slide Sign/ Insert into grooves of Push Bar and install Solid Push Bar Cap from Pack "B".
- Level the device on the door. Using Mounting Bracket as a guide, mark rear hole locations and drill holes.
- Install Housing End Bracket with 2 ea. 12-24 MS and Sex Bolts.
- Install Nose Piece screws. See Drawing.
- Electrical Options: Prep device and door for specified power transfer.
- Slide extrusion cover into housing and install Housing Rear End Cap with 10-32 screw from Pack "B".

STEP 3: SECURE STRIKE

- Using "A" Mounting Holes, mount strike with 12-24 MS as shown in above drawing. Do not tighten screws.
- Adjust Strike to allow a 1/32" to 1/16" gap between the door face and the edge of stop. Tighten screws.
- Test device operation. Strike may need further adjustment due to door conditions and/or weatherstripping.
- Drill and tap "E" center mounting hole.
- Install 12-24 MS in center of strike.

Warranty is void if center screw is not installed.

TROUBLESHOOTING TIPS

Q. Device does not lock.

- The strike may not be adjusted properly. See step 3.
- The Housing Extrusion must be 1-3/16" from edge of stop. A shim may be required.

1-3/16": No Shim
1-1/4": 1 Shim
1-5/16": 2 Shims

Q. Depressing the push bar will not unlock device.

- Notched Push Bar End Cap must be installed on the Push Bar end closest to the latch.

Q. Outside key control will not unlock device.

- Nosepiece Key Cam must be parallel to the ledge when installed. See drawing above.
- Tailpiece of the rim cylinder must be in the vertical position.

Optional

Lockey USA PB2500AL ALARM Instructions

STANDARD FEATURES

- Horn factory-set to sound for 90 seconds with automatic reset, or can be field selected to be a continuous horn.
- Audible chirp when turned "ON", Red LED flashes to signal "ON"

PB2500AL:

Powered by 9 Volt Battery with low battery chirp @ 7.5V

ALARM OPERATION INSTRUCTIONS:

Alarm will sound when push bar is depressed.

- ON:** Turn key clockwise. Horn will "chirp" once.
The Red LED will blink once every 20 seconds signaling it is armed.
- OFF:** Turn key counterclockwise one click to disarm.
The Horn will "chirp" intermittently when the battery is low.
See below for instructions to change battery.

After installation, peel and apply label next to alarm cylinder.

BATTERY REPLACEMENT:

1. Do not remove Housing End Cap.
2. Turn key counterclockwise past the "OFF" position until Key Cylinder stops and hold in position. The alarm is now freed from lock post.
3. Slide Alarm Module toward hinge side of door to expose battery.
4. Turn key clockwise to center.
5. Replace with a 9 Volt Battery.
6. Slide Alarm Module toward the Push Bar until it snaps into the locked position.
7. Test operation.

TROUBLESHOOTING:

Alarm will not sound when activated:

- Test battery.

HORN TIME SELECTION

Wiring for SS1-A and SS2-A, 12 or 24 VDC External Power

ALARM KIT INSTALLATION:

1. Slide Lock Plate into bottom grooves of Housing Extrusion and position up flush to Push Bar/Chassis Assembly.
2. Secure Lock Plate with Allen Wrench by tightening set screw in post.

CYLINDER INSTALLATION:

1. Remove Yellow Plug in the cylinder hole and discard.
2. Remove Key and insert Cylinder as shown.
3. Install Cylinder Keeper over Cylinder and secure with Cylinder Nut.
4. Remove Housing End Cap from Pack "B".
Install Housing End Cap onto Alarm Cover Bracket with 1 each 8-32 x 3/8" OHPMS Screw.
5. Install Alarm Cover into upper grooves of Housing Extrusion and slide towards Push Bar until it snaps into locked position.

Note: The hook on the Alarm Module locks onto the Post of the Lock Plate located in the bottom of the Housing track.

SS1-A Switch Rating: 1.0 A at 30 VDC
(Switch is activated by the Push Bar)

SS2-A Switch Rating: 1.0 A at 24 VDC
(Switches are deactivated when alarm is in "OFF" position)

Current draw:
With alarm sounding: 0.21 ma @ 9 V, 12 V, 24 V
In stand by mode: 0.005 ma @ 9 Volt battery
2.6 ma @ 12 VDC or 24 VDC
Observe polarity shown
